Boz Medical Device Industry and Trade Inc.

Boz Medical Device Industry and Trade Inc. is founded by Adil Boz and Ali Aykut Boz in August of 2009 in Ankara. Common grandfather Adil Boz and father Orhan Boz of the founders are one of the oldest people in health sector in Turkey.

Adil Boz (Grandfather) began his trade life in 1940s. He founded a small family company, began to produce the gauze in 1960s, plaster of paris bandage and absorbent cotton in 1970's to the health sector. He is the one of oldest medical device producer of Türkiye. The company founded by Adil Boz located in Uşak, produced integratedly from raw cotton to the yarn; from yarns to the woven; woven textile raw materials, home and hospital textile fabrics and provided job oppornuties to 1500 people in its facilities.

Orhan Boz founded a company that gives his own name in 1983, and has begun to his trade life with selling product of gauze, plaster of paris bandage and absorbent cotton that is produced by Adil Boz in Uşak. After noticing lack of the surgical suture goods, in 1993 he has begun to trial production after set up factory for the purpose of producing surgical sutures with the name of ORHAN BOZ MEDICAL DEVICE CO. In year of 1998 he manufactured the products of gauze compress, sponge, cotton pad, gauze roll that are produced from gauze. Boz family, since they have gone into the bussine life in Republic of Turkiye, created a competitive enviroment against the a lot of international companies and has played a important role in our natioal interests.

In 2009, Boz Medical Device Industry and Trade Inc. founded by Ali Aykut Boz and Adil Boz, has aimed in accordance with emerging market needs and conditions to be in position of manufacturer and has achived its goal in month of April of 2012.

The factory established in Ankara, has 8600 m2 closed areas and 1200 m2 clean rooms. In the facility has equipped with modern climate system, the white areas are the level of class III. The minimum requirements in production, is executed prepared towards the World Health Organization's (WHO) proposed principles and published "Good Production Applications" by T.C. Ministry of Health. Rigor and Hygenic are essential at all level of Production.

Needle Information & Use of Surgical Needles

- Taper Point
- Square Body, Taper Point
- Blunt
- Reverse Cutting
- Inside Cutting
- Diamond
- Spatula
- Lancet
- CC Needle
- Tapercutting
- Trocar
- Square Body Tapercutting

Tip Shapes According to Lengths

Round Body, Taper Point

Doesn't have a cutting edge. Has a conic body becoming sharp towards its tip. Is used in tissues showing low resistance to the needle.

Square Body, Taper Point

Doesn't have a cutting edge. Has a conic body becoming sharp towards its tip. In order to strengthen the body of the needle, the body is given a square shape.

Blunt

Doesn't have a property of cutting and drilling. Is used in parenchyma tissues that can be easily damaged like liver and kidney.

Reverse Cutting

Reverse (Outside apex) cutting needle has cutting edges at the bottom and in its two sides, becomes sharp towards its tip and has triangular point.

Inside Cutting

Inside (Inside apex) cutting needle has cutting edges at the top and in its two sides, becomes sharp towards its tip and has triangular point.

Diamond

This needle has a keen tip. It angled conically towards the needle body. It's generally used in hard tissues.

Spatula

This needle is flat and become thinner towards its tip. It's especially used in ophthalmic surgery.

Lancet

Its structure looks like spatulated needle. However, its tip isn't parallel but oblique to its body. Edges of its top are sharp. It's generally used in ophthalmic surgery.

CC Needle

It combines the properties of round and cutting needles. Three cutting edges of the needle does not combine with the round body. Sharp edges have single cutting type.

Tapercutting

Combine the features of the reverse cutting edge tip and taper point needles. Three cutting edges extend from the point. These blend into a round taper body. All three edges are sharpened to provide uniform cutting action.

Trocar

Trocar needle has a strong cutting tip. The tip of the needle have been designed for penetration of the even dense tissues.

Square Body Tapercutting

In order to strengthen the body of the tapercutting needle, the body is given a square shape.

Needle Point Profiles

Taper Point		<p>Doesn't have a cutting edge. Has a conic body becoming sharp towards its tip. Is used in tissues showing low resistance to the needle.</p>
Square Body, Taper Point		<p>Doesn't have a cutting edge. Has a conic body becoming sharp towards its tip. In order to strengthen the body of the needle, the body is given a square shape.</p>

Angle of Needles & Needle Shape

The choice of needle shape is frequently governed by the accessibility of the tissue to be sutured, and normally the more confined the operative site the greater the curvature required. The basic shapes involved are:

1/4 Circle

3/8 Circle

1/2 Circle

5/8 Circle

J Shape

Straight

Comparison of Suture Size

A

USP values are stated for the non-absorbable mono and multiflament, absorbable multiflament sutures in the columns under A.

USP	Metric	Suture Diameter, mm	% reduction
3	6	 0.600-0.699	
2	5	 0.500-0.599	28
1	4	 0.400-0.499	33
0	3.5	 0.350-0.399	30
2/0	3	 0.300-0.349	25
3/0	2	 0.200-0.249	43
4/0	1.5	 0.150-0.199	40
5/0	1	 0.100-0.149	50
6/0	0.7	 0.070-0.099	53
7/0	0.5	 0.050-0.069	49
8/0	0.4	 0.040-0.049	42
9/0		 0.030-0.039	
10/0		 0.020-0.029	

B

USP values are stated for the monofilament absorbable sutures in the columns under B.

USP	Metric	Suture Diameter, mm	% reduction
3		 0.600-0.699	
2	5	 0.571-0.610	
1	4	 0.500-0.570	18
0	3.5	 0.400-0.499	30
2/0	3	 0.340-0.399	32
3/0	2	 0.250-0.339	37
4/0	1.5	 0.200-0.249	35
5/0	1	 0.150-0.199	40
6/0	0.7	 0.095-0.149	52
7/0	0.5	 0.050-0.094	66
8/0		 0.040-0.049	
9/0		 0.030-0.039	
10/0		 0.020-0.029	

Use of Needle Holders

1- The needle holder should be carefully selected to match the size and strength of the needle to be used. The use of a needle holder larger than required can result in damage to the needle and in particular, distortion of the curvature.

2- The needle holder should be in good condition as worn jaws can result in needle rotation and instability in the needle holder. Nicks or defects in the needle holder jaws can also cause damage to the needle and loss of strength.

3- Needles should be grasped securely on the tip of the needle holder jaws.

4- Needles should only be held in the flattened area provided and should not be grasped on the attachment area or near to the needle point. Needles which are not flatted should be grasped for placement at a point approximately one third of the needle length from the butt. Excessive force should not be applied when gripping the needle, particularly with Tungsten Carbide jaw inserts, as this may damage the needle body and cause loss of strength or breakage.

Use of Surgical Needles

- 1- The force required to achieve passage of the needle through tissue should be applied in a direction following the curvature of the needle.
- 2- Care should be taken to match the size of the needle to the size of tissue bite required. The use of too small a needle for a given tissue bite can lead to bending.
- 3- Should the placement of the needle in tissue require to be readjusted, the needle should be removed and re-inserted. No attempt should be made to twist the needle in tissue.
- 4- The needles should normally be inserted separately into each side of the tissue to be approximated and should not be used to bridge a wound.

Packaging

Sutures are packed in one or two / three dozen boxes.
Boxes are designed for easy usage and environmental friendly have been.
Box labels are colour coded for easy suture type defining.
Pealable double blister is the individual package.
Blister consists of transparent polyethylene film and medical grade of paper.
Paper is coloured with Ethylene Oxide (EO) indicator; yellow colour proves the product processed in EO gas.

Labelling

The Following symbols(from European Standard En980) are used on our labelling

- On each product and box; type of the suture, USP and EP size, needle length and following signs are stated.

Certificates Labelling

CE-mark and identification number of notified body. Product conforms to the essential requirements of the Medical Device Directive 93/42/EEC

Medical Device Directive Labelling

- The following symbols (from European Standard EN980) are used on our labelling.

Do not reuse.

YYYY - MM

Use until year and month.

Sterile Product-Method of Sterilization-Ethylene Oxide.

Sterile Product-Method of Sterilization-Irradiation.

Batch Number

Marking of Conformity. Notified Body number.

Additional Labelling

- For reordering products are defined by code numbers.

Product Catalogue (Code) Number.

- To supply easy informing needle shape is clearly defined by drawings.

Needlepoint side view, cutting edge, taper etc.

Three dimensional view of the needle point.

Needle shape: 1/2 c. etc. and; length. Double needle shows double armed.

Multi - Lingual Symbols

The European Association of Surgical Suture Industry has developed a system of symbols which is designed to describe various suture product characteristics in an intuitive, pictorial manner. The use of symbols is permitted by the Medical Device Directive and enables companies to provide information to the customer without having to provide multilingual translations.

Symbol	Description	Example Product
	Dyed, Absorbable, Braided, Coated	GLIKOLAK, GLIKOSORB, <i>Antibacterial</i> GLIKOLAK Plus, <i>Antibacterial</i> GLIKOSORB Plus
	Dyed, Absorbable, Monofilament	MONOKAPROL, POLIDIOX, <i>Antibacterial</i> MONOKAPROL Plus, <i>Antibacterial</i> POLIDIOX Plus
	Dyed, Non-absorbable, Braided, Coated	SILK, MULTAMID, POLISIL, POLYTEF
	Dyed, Non-absorbable, Monofilament	MONOPROLEN, MONOFLORID, MONAMID
	Dyed, Non-absorbable, Twisted, Coated	SILK
	Undyed, Absorbable, Braided, Coated	FASTLAK, FASTSORB, GLIKOLAK, <i>Antibacterial</i> GLIKOLAK Plus
	Undyed, Absorbable, Monofilament	MONOKAPROL, <i>Antibacterial</i> MONOKAPROL Plus
	Undyed, Non-absorbable, Braided, Coated	SILK
	Undyed, Non-absorbable, Monofilament	MONAMID, MONOTEF, MONOWIRE
	Undyed, Non-absorbable, Twisted, Coated	SILK, TEMPOWIRE
	Undyed, Non-absorbable Twisted	

Dozen Box

Standard individual package is a dozen box.
Twelve of sachets are put in drawer box, than the box is labelled.

Double or triple dozen boxes are used for packaging of 24/36 sachets on request.

Long Boxes

To avoid bending, monofilament stainless steel wires are put in individual envelopes which are as long as suture length. Then they are boxed in long boxes at the same size.

Shipping Container

Depending on order quantity boxes are put in containers which can store 40/60 or 100 standard boxes.

All boxes are preshrinked before packaging.

Surgical Sutures Absorbable

Glikosorb

Surgical Suture, Polyglycolicacid (PGA) Absorbable, Synthetic, Braided

Boz®

Definition

Synthetic absorbable, coated, mid term wound support and mid term mass absorption.

Material

Polyglycolic Acid (PGA)

Coating

Calcium Stearate and polycaprolactone

Structure

Braided - Multifilament

Colour

Violet (dyed) or Beige (undyed)

Size

EP : 0.4 to 8

USP : 8/0 to 6

Tensile Strength Retention

2. Week 75 % - 3. Week 50 %

Mass Absorption

60-90 days

Sterilization Method

Ethylene Oxide Gas

Main Indication

Gastrointestinal Surgery

Gynaecology

Ophthalmic Surgery

Orthopedics

Urology

Skin closer - intracutaneous, subcutaneous.

Glikolak

Surgical Sutures
Absorbable

Surgical Suture, Poly[glycolide(90%)-co-lactide(10%)](PGLA)
Absorbable, Synthetic, Braided

Boz[®]

Definition

Synthetic absorbable, coated, mid term wound support and mid term mass absorption.

Material

Poly(glycolide-co-lactide)
glycolide 90% -lactide 10 % (PGLA)

Coating

Poly(glycolide-co-lactide) (30/70) & calcium stearate

Structure

Braided-Multifilament

Colour

Beige (undyed) or Violet (dyed)

Size

EP : 0.4 to 5

USP : 8/0 to 2

Tensile Strength Retention

2. Week 75%

Mass Absorption

55-70 days

Sterilization Method

Ethylene Oxide Gas

Main Indication

Gastrointestinal Surgery

Gynaecology

Ophthalmic Surgery

Orthopedics

Urology

Skin closer - intracutaneous, subcutaneous.

Ligatures

Glikolak

Surgical Suture, Poly[glycolide(90%)-co-lactide(10%)](PGLA)
Absorbable, Synthetic, Braided

Fastorb

Surgical Suture, Polyglycolicacid (PGA)
Fast Absorbable, Synthetic, Braided, Undyed

Surgical Sutures
Absorbable

BOZ[®]

Definition

Synthetic absorbable, coated, short term wound support and short term mass absorption.

Material

Polyglycolic Acid (PGA)

Coating

Calcium Stearate and polycaprolactone

Structure

Braided

Colour

Beige (undyed)

Size

EP : 0.4 to 8

USP : 8/0 to 6

Tensile Strength Retention

7 Days 75 %

Mass Absorption

42 days

Sterilization Method

Gamma Irradiation

Main Indication

Gynaecology (episiotomies)

Urology

Ophthalmic surgery (conjunctive suturing)

Odontology (oral mucosa)

Pediatric surgery

Skin closer - intracutaneous, subcutaneous.

Ligatures

Fastorb

Surgical Suture, Polyglycolicacid (PGA) Fast Absorbable, Synthetic, Braided, Undyed

Surgical Sutures Absorbable

Polidiox

Surgical Suture, Polydioxanone (PDO) Absorbable,
Synthetic, Monofilament, Violet

Boz®

Definition

Synthetic absorbable, wound support through an extended healing period

Material

Polydioxanone (PDO)

Coating

No coating

Structure

Monofilament

Colour

Violet (dyed)

Size

EP : 0.5 to 5

USP : 7/0 to 2

Tensile Strength Retention

2. Week 70 %

Mass Absorption

180-240 days

Sterilization Method

Ethylene Oxide Gas

Main Indication

Orthopaedics

General Surgery

Abdominal Wall Closure

Paediatric cardiovascular tissues

Ophthalmic Surgery

Polidiox

Surgical Suture, Polydioxanone (PDO) Absorbable, Synthetic, Monofilament, Violet

Surgical Sutures
Absorbable

Antibacterial Glikosorb Plus

Surgical Suture, Polyglycolic acid (PGA) Absorbable, Synthetic, Braided

Boz[®]

Definition

Synthetic absorbable, coated, antibacterial mid term wound support and mid term mass absorption.

Material

Polyglycolic Acid (PGA)

Antibacterial Agent

CHA (Chlorhexidine diacetate)

Coating

Calcium Stearate and poly(glycolide-co-lactide)

Structure

Braided - Multifilament

Colour

Violet (dyed)

Size

EP : 1 to 5

USP : 5/0 to 2

Tensile Strength Retention

2. Week 90 % - 3. Week 50 %

Mass Absorption

70-90 days

Sterilization Method

Ethylene Oxide Gas

Main Indication

Gastrointestinal Surgery

Gynaecology

Orthopedics

Urology

Skin closer - intracutaneous, subcutaneous.

Ligatures

Antibacterial Glikosorb Plus

Surgical Suture, Polyglycolic acid (PGA)
Absorbable, Synthetic, Braided

Surgical Sutures Absorbable

Antibacterial Glikolak Plus

Surgical Suture, Poly[glycolide(90%)-co-lactide(10%)](PGLA)
Absorbable, Synthetic, Braided

Boz®

Definition

Synthetic absorbable, coated, antibacterial mid term wound support and mid term mass absorption.

Material

Poly(glycolide-co-lactide)
glycolide 90% -lactide 10 % (PGLA)

Antibacterial Agent:

CHA (Chlorhexidine diacetate)

Coating

Poly(glycolide-co-lactide) & calcium stearate

Structure

Braided-Multifilament

Colour

Beige (undyed) or Violet (dyed)

Size

EP : 1 to 5
USP : 5/0 to 2

Tensile Strength Retention

2. Week 75%

Mass Absorption

55-70 days

Sterilization Method

Ethylene Oxide Gas

Main Indication

Gastrointestinal Surgery
Gynaecology
Orthopedics
Urology
Skin closer - intracutaneous, subcutaneous.
Ligatures

Antibacterial

Glikolak Plus

Surgical Suture, Poly[glycolide(90%)-co-lactide(10%)](PGLA)

Surgical Sutures Absorbable

Antibacterial Monokaprol Plus

Surgical Suture, Poly[glycolide(75%)-co-caprolactone(25%)](PGCL)
Absorbable, Synthetic, Monofilament

Boz®

®

Definition

Synthetic absorbable, antibacterial, closure of superficial wounds

Material

Poly(glycolide (75%)- co-caprolactone (25%) (PGCL)

Antibacterial Agent:

CHA (Chlorhexidine diacetate)

Coating

No coating

Structure

Monofilament

Colour

Undyed Beige (undyed) or Violet (dyed)

Size

EP : 1 to 5

USP : 5/0 to 2

Tensile Strength Retention

1. Week 70 % - 75 % - 2. Week 40 % - 50%

Mass Absorption

90 - 120 Days

Sterilization Method

Ethylene Oxide Gas

Main Indication

Gynaecology

Obstetrics

Urology

Plastic Surgery

Odontology (oral mucosa)

Skin closer - intracutaneous, subcutaneous.

Surgical Sutures Non-Absorbable

Silk

Surgical Suture, Silk, Silicone Coated
Nonabsorbable, Noncapillary

Boz®

Definition

Natural Non-absorbable

Material

Natural Silk

Coating

Silicon Coated, Paraffin Wax, Uncoated

Structure

Braided, Twisted

Colour

Black, Ivory, methylene blue

Size

EP : 0.2 to 7

USP : 10/0 to 5

Tensile Strength Retention

Moderate Loss

Mass Absorption

Permanent

Sterilization Method

Ethylene Oxide Gas

Main Indication

Ligatures
Skin Closure
Oral Surgery
Neurosurgery
Cardiovascular procedures
Ophthalmic procedures

Silk

Surgical Suture, Silk, Silicone Coated Nonabsorbable, Noncapillary

Monoflorid

Surgical Suture, Poly(vinylidene difluoride) (PVDF)
Nonabsorbable, Synthetic, Monofilament

BOZ[®]

Definition

Synthetic Non-Absorbable

Material

Polyvinylidene difluoride (PVDF)

Coating

No Coating

Structure

Monofilament

Colour

Blue, Black

Size

EP : 0.2 to 5

USP : 10/0 to 2

Tensile Strenght Retention

Permanent

Mass Absorption

Permanent

Sterilization Method

Ethylene Oxide Gas

Main Indication

Cosmetic Surgery

Skin closure

Cardiovascular procedures

Ophthalmic procedures

Neurosurgical procedures

Monoflorid

Surgical Suture, Poly(vinylidene difluoride) (PVDF)
Nonabsorbable, Synthetic, Monofilament

▶ PTFE pledget

(Accessory for sutures)

Boz®

Surgical Pledget PTFE

Description

Boz® Pledgets are pre-cut pieces from a sheet of polytetra-fluoroethylene (PTFE) non-woven fabric that is used to cushioning the load of the suture against host tissue. Pledgets are indicated as sterile, single use, implantable devices.

Indications

To buttress sutures in cardiovascular surgery.

Absorbability-Tissue Reaction

Non-Absorbable. It's inert to body fluids and enzymes.

REOXCEL

Absorbable Haemostat,
Oxidized Regenerated Cellulose (ORC)

Reliable Performance

Safe Haemostasis
Effective Against Bacteria

- ▶ Light knit formation covers uneven tissue
- ▶ Applicable on wide range of operations

DESCRIPTION

REOXCEL Absorbable Haemostat is a sterile haemostatic preparation available in the flat form with textile structure and made of Oxidized Regenerated Cellulose (ORC) (polyanhydro glucuronic acid). REOXCEL Absorbable Haemostat complies with the requirements of the United States Pharmacopoeia for "Oxidized Regenerated Cellulose". REOXCEL Absorbable Haemostat does not contain any animal or collagen additives. REOXCEL Absorbable Haemostat can be sutured and cut without fraying. Its structure is stable and should be stored at controlled room temperature. The fabric is pale yellow and has a faint, caramel-like aroma. Although a slight discoloration may occur with time, this does not affect its performance.

ACTIONS

REOXCEL Absorbable Haemostat can be laid on, held against, closed exactly or sutured to a bleeding surface. REOXCEL Absorbable Haemostat is applied as dry. Action mechanism of REOXCEL Absorbable Haemostat is independent from blood coagulation mechanism of the body. REOXCEL Absorbable Haemostat forms a brownish or black gelatinous mass which aids clot formation in 3-4 minutes when it contacts with blood. This gelatinous mass acts as a physical matrix to which platelets can adhere. With platelet aggregation and formation of platelet-fibrin plug, haemostasis occurs. REOXCEL Absorbable Haemostat is absorbed from the sites of implantation without tissue reaction when it is used properly in minimal amounts. Absorption depends on; tissue type, haemostat amount used and saturation degree of blood. It is completely absorbed in 7-14 days. REOXCEL Absorbable Haemostat has been shown to be bactericidal in vitro against 40 types of Gr(+) (gram positive) and Gr (-) (gram negative) microorganisms including those of.

All-Round Performance

Safe Haemostasis
Effective Against Bacteria

- ▶ Thin layers of web adapt easily to uneven and hard to
- ▶ Moistened light layer web allows bipolar cauter use
- ▶ Range of diverse forms; Light single layers, Roll, Pad, Tufts

DESCRIPTION

REOXCEL FIBRIL Absorbable Haemostat is a sterile haemostatic preparation available in the fibrous form and made of Oxidized Regenerated Cellulose (ORC) (polyanhydroglucuronic acid). REOXCEL FIBRIL Absorbable Haemostat complies with the requirements of the United States Pharmacopoeia for "Oxidized Regenerated Cellulose". REOXCEL FIBRIL Absorbable Haemostat does not contain any animal or collagen additives. REOXCEL FIBRIL Absorbable Haemostat can be cut without fraying. Its structure is stable and should be stored at controlled room temperature. It is pale yellow and has a faint, caramel-like aroma. Although a slight discoloration may occur with time, this does not affect its performance. Under favour of its fibrous form surgeon can grasp with forceps any amount of REOXCEL FIBRIL Absorbable Haemostat needed to achieve haemostasis at a particular bleeding site. This provides surgeon to reach irregularly shaped bleeding sites. It is easy to pull the desired amount of REOXCEL FIBRIL Absorbable Haemostat and the group of selected fibres continue to cohere to one another. It does not disperse over the operative site unwantedly.

ACTIONS

REOXCEL FIBRIL Absorbable Haemostat can be laid on, held against, closed exactly to a bleeding surface. REOXCEL FIBRIL Absorbable Haemostat is applied as dry. Action mechanism of REOXCEL FIBRIL Absorbable Haemostat is independent from blood coagulation mechanism of the body. REOXCEL FIBRIL Absorbable Haemostat forms a brownish or black gelatinous mass which aids clot formation in 3-4 minutes when it contacts with blood. This gelatinous mass acts as a physical matrix to which platelets can adhere. With platelet aggregation and formation of platelet-fibrin plug, haemostasis occurs. REOXCEL FIBRIL Absorbable Haemostat is absorbed from the sites of implantation without tissue reaction when it is used properly in minimal amounts. Absorption depends on; tissue type, haemostat amount used and saturation degree of blood. It is completely absorbed in 7-14 days. REOXCEL FIBRIL Absorbable Haemostat has been shown to be bactericidal in vitro against 40 types of Gr(+) (gram positive) and Gr(-) (gram negative) microorganisms including those of.

ZEOCEL

Absorbable Haemostat,
Oxidized Cellulose (OC)

Safe Haemostasis Effective Against Bacteria

DESCRIPTION

ZEOCEL Absorbable Haemostat is a woven sterile hemostatic agent formed of oxidized cellulose (OC) (polyanhydro glucuronic acid). It has been manufactured from alpha grade cotton. Agent is a pale yellow material and has a caramel like smell. As it is stored in controlled room temperature, there might be a slight change in color in time but this does not effect the performance of the material. ZEOCEL Absorbable Haemostat complies with the requirements of the United States Pharmacopoeia for "Oxidized Cellulose". ZEOCEL Absorbable Haemostat does not contain any animal or collagen additives.

ACTIONS

ZEOCEL Absorbable Haemostat can be applied to bleeding surface in different forms. The haemostatic agent material can be closed exactly, pressured against or sutured to the desired usage area. ZEOCEL Absorbable Haemostat should be used as dry. After the application of the material to the bleeding surface, haemostatic agent will form a black gelatin like mass. The gelatin like mass will aid haemostasis process by allowing the platelet aggregation and formation of platelet-fibrin plug. The coagulation will be achieved in 3-4 minutes after ZEOCEL's contact with the bleeding area. When ZEOCEL Absorbable Haemostat is used only as needed, it will be absorbed from the site of usage without tissue reaction. Absorption of the haemostatic agent from the used site depends on the amount of haemostatic agent used, tissue type and blood saturation degree. The material will be fully absorbed in 7-14 days.

ZEOCEL Absorbable Haemostat has been shown to be bactericidal in vitro against 40 types of Gr(+) (gram positive) and Gr(-) (gram negative) microorganisms including those of.
